

Why **SAVE** Energy?

Servo Electric "Roller Screw" Actuators

- No Oil
- No Air
- No Leaks
- No maintenance

How much does your machine cost to run?

The annual costs are based on an energy cost of compressed air of £0.12 per kWh, this calculation assumes that the air supply is constant and that the compressor is efficient (many are not).

Source: *Improving Compressed Air System Performance*, US Department of Energy.

IN ADDITION: Electric Actuators only use energy when needed = up to 90% savings!
